Chapter I—Production and Marketing Administration (Standards, Inspections, Marketing Practices), Department of Agriculture

PART 51—FRESH FRUITS, VEGETABLES AND OTHER PRODUCTS (INSPECTION, CERTIFICATION, AND STANDARDS)

SUBPART B—UNITED STATES STANDARDS

SAWDUST PACK GRAPES (EUROPEAN OR VINIFERA TYPE)

On July 30, 1953, a notice of proposed rule making was published in the FEDERAL REGISTER (F. R. Doc. 53-6686; 18 F. R. 4462) regarding proposed United States Standards for Sawdust Pack Grapes (European or Vinifera type).

A period of thirty days was allowed for submitting written data, views and arguments for consideration in connection with the proposed standards. After consideration of all relevant matters presented, including the proposals set forth in the aforesaid notice of rule making, the following United States Standards for Sawdust Pack Grapes (European or Vinifera type) are hereby promulgated under the authority contained in the Agricultural Marketing Act of 1946 (60 Stat. 1087; 7 U. S. C. 1621 et seq.) and the Department of Agriculture Appropriation Act, 1954 (Pub. Law 156, 83d Cong., approved July 28, 1953).

§ 51.231 *Standards for sawdust pack grapes (European or Vinifera type)*[1]—(a) *Grades*—(1) *U. S. Fancy Sawdust Pack Grapes.* U. S. Fancy Sawdust Pack Grapes consists of bunches of well developed grapes of one variety which are well matured, fairly uniform in appearance and well colored. The berries shall be firm, firmly attached to capstems and shall not be weak, shriveled at capstems, shattered, split, crushed or wet, and shall be free from decay, waterberry, sunburn and Almeria Spot, and free from damage caused by scarring, discoloration, heat, mildew, other diseases, freezing, insects or mechanical or other means.

(i) *Bunches.* The bunches shall be fairly well filled but not excessively tight. They shall also be free from injury caused by shot berries, dried berries or other defective berries or by the trimming away of defective berries and they shall weigh not less than one-half pound.

(ii) *Stems.* The stems shall be mature, well developed and strong, shall not be dry and brittle, shall be free from mold and free from damage caused by mildew or freezing. The Emperor variety shall have stems which are distinctly yellowish-green or yellow at time of packing.

(iii) *Size of berries.* Not less than 90 percent, by count, of the berries, exclusive of shot berries and dried berries, on each bunch shall have a minimum diameter as indicated by varieties as follows:

Ribier and Cardinal: 12/16 of an inch.
Tokay: 11/16 of an inch.
Almeria: 9/16 of an inch.
Thompson Seedless and Black Monukka: 7/16 of an inch.
Other varieties: 12/16 of an inch.

(iv) *Tolerances.* In order to allow for variations incident to proper grading and handling, the following tolerances, by weight, shall be permitted:

(*a*) 5 percent for bunches which fail to meet the requirements for minimum diameter of berries;

(*b*) 5 percent for bunches which weigh less than one-half pound;

(*c*) 10 percent for bunches which fail to meet the color requirements;

(*d*) 5 percent for bunches which fail to meet the requirements for maturity of stems and color of stems; and,

(*e*) 5 percent for bunches and berries which fail to meet the remaining requirements of this grade, other than for maturity and uniformity of appearance, including therein not more than 3 percent for shattered berries and also including therein not more than one-half of 1 percent for berries which are seriously damaged or affected by decay.

(v) There is no tolerance specified in this grade for grapes which fail to meet the maturity requirements. However, no lot shall be considered as failing to meet these requirements because the sample of grapes from one container tests below the required percentage of soluble solids.

(2) *U. S. No. 1 Sawdust Pack Grapes.* U. S. No. 1 Sawdust Pack Grapes consists of bunches of well developed grapes of one variety which are mature and fairly well colored. The berries shall be firm, firmly attached to capstems and shall not be weak, shriveled at capstems, shattered, split, crushed or wet, and shall be free from decay, waterberry, sunburn and Almeria Spot, and free from damage caused by scarring, discoloration, heat, mildew, other diseases, freezing, insects or mechanical or other means.

(i) *Bunches.* The bunches shall not be straggly. They shall be free from damage caused by shot berries, dried berries or other defective berries or by the trimming away of defective berries and they shall weigh not less than one-half pound.

(ii) *Stems.* The stems shall be well developed and strong, shall not be dry and brittle and shall be free from mold and free from damage caused by mildew or freezing.

(iii) *Size of berries.* Not less than 90 percent, by count, of the berries, exclusive of shot berries and dried berries, on each bunch shall have a minimum diameter as indicated by varieties as follows:

Ribier, Tokay, and Cardinal: 11/16 of an inch.
Almeria: 9/16 of an inch.
Thompson Seedless and Black Monukka: 7/16 of an inch.
Other varieties: 12/16 of an inch.

(iv) *Tolerances.* In order to allow for variations incident to proper grading

[1] These standards shall be applicable only to grapes properly packed in sawdust or granulated cork, and not to so-called "semi-sawdust packs" which are cushioned and/or covered with sawdust.

and handling, the following tolerances, by weight, shall be permitted:

(a) 5 percent for bunches which fail to meet the requirements for minimum diameter of berries;

(b) 10 percent for bunches which weigh less than one-half pound;

(c) 10 percent for bunches which fail to meet the color requirements; and,

(d) 5 percent for bunches and berries which fail to meet the remaining requirements of this grade, other than for maturity, including therein not more than one-half of 1 percent for berries which are seriously damaged or affected by decay.

(v) There is no tolerance specified in this grade for grapes which fail to meet the maturity requirements. However, no lot shall be considered as failing to meet these requirements because the sample of grapes from one container tests below the required percentage of soluble solids.

(b) *Unclassified.* Unclassified consists of grapes which have not been classified in accordance with either of the foregoing grades. The term "unclassified" is not a grade within the meaning of these standards, but is provided as a designation to show that no grade has been applied to the lot.

(c) *Application of tolerances to individual packages.* (1) The contents of individual packages in the lot, based on sample inspection, are subject to the following limitations: *Provided,* That the averages for the entire lot are within the tolerances specified for the grade:

(i) For a tolerance of 10 percent or more, individual packages in any lot may contain not more than one and one-half times the tolerance specified; and,

(ii) For a tolerance of less than 10 percent, individual packages in any lot may contain not more than double the tolerance specified, except that for shattered berries and wet berries not more than one-tenth of the packages may contain more than double the tolerance specified.

(d) *Definitions.* (1) "Well developed grapes" means grapes which are not abnormally small for the variety.

(2) "One variety" means that the grapes show similar varietal characteristics.

(3) "Well matured" means that the juice from 10 percent, by weight, of whole bunches of grapes in the container, which appear to be least mature, shall test not less than 17 percent soluble solids, as determined by the Balling or Brix scale hydrometer, except that the Tokay variety shall test not less than 18 percent, the Thompson Seedless variety shall test not less than 19 percent and the Malaga and Muscat varieties shall test not less than 20 percent.

(4) "Fairly uniform in appearance" means that not more than one-tenth of the containers in any lot may show sufficient variation in color or size of berries to materially detract from the appearance of the contents of the individual container.

(5) "Well colored" means in the case of:

(i) "Black varieties" that each bunch shall have not less than 95 percent, by count, of berries showing characteristic color. Purple to black shall be considered characteristic color for the varieties Malvoise, Rose of Peru, Black Prince and Black Hamburg; reddish-purple to black shall be considered characteristic color for Cornichon and Black Monukka. Ribier grape berries shall be considered as showing characteristic color when at least 60 percent of the surface is purple to black color, not reddish-purple;

(ii) "Red varieties" that each bunch of the Tokay variety shall have not less than 60 percent, by count, and other red varieties shall have not less than 75 percent, by count, of berries which show at least 60 percent of the surface with good characteristic color: *Provided,* That the appearance of the bunch shall not be appreciably injured by very dark berries. Light or cherry red and dark red, but not light pink or very dark or purplish-red, are considered good characteristic color for the red varieties, excepting that any color ranging from light red through purple shall be considered good characteristic color for the Cardinal variety; and,

(iii) White varieties: There are no color requirements for the white varieties.

(6) "Firm" means that the berry is reasonably turgid and does not yield more than slightly to moderate pressure.

(7) "Weak" means that the berry is relatively low in sugar content, has inferior flavor and usually is watery, translucent and somewhat soft to the touch.

(8) "Shriveled at capstem" means that the berry shows more than slight wrinkling of the skin surrounding the capstem.

(9) "Shattered" means that the berry is separated from the bunch and may or may not have the capstem attached.

(10) "Wet" means that the grapes are wet from moisture from crushed, leaking or decayed berries or from rain. Grapes which are moist from dew or other moisture condensation such as that resulting from removing grapes from a refrigerator car or cold storage to a warmer location shall not be considered as wet.

(11) "Decay" means any soft breakdown of the flesh or skin of the berry resulting from bacterial or fungus infection. Slight surface development of green mold (Cladosporium) shall not be considered decay.

(12) "Waterberry" means a watery soft or flabby condition of the berries. Affected berries are low in sugar content, have tender skins and are easily crushed. This is an advanced or more pronounced stage of the condition referred to as "weak."

(13) "Sunburn" means injury to the berry caused by direct exposure to the sun, including "sulphur burn" occurring as a sunken and usually discolored and dried area on the exposed surface.

(14) "Damage" means any defect which materially affects the appearance, or the edible or shipping quality of the individual berry the appearance of the bunch as a whole, or the shipping quality of the stems.

(i) Any one of the following defects, or any combination of defects, the seriousness of which exceeds the maximum allowed for any one defect, shall be considered as damage to the individual berry:

(a) Scarring such as that caused by thrip, mildew, rubs and similar injuries when materially affecting the appearance of the berry;

(b) Discoloration when any light brown, tan or darker discoloration of the skin materially affects the appearance of the berry: *Provided,* That "sunkissed" berries of the white Malaga variety which show discoloration of amber or light brown color shall not be considered as damaged. "Buckskin" berries of the Tokay variety, and similar injury to other varieties, shall be considered as damaged by discoloration;

(c) Heat when the flesh of the berry is affected;

(d) Mildew when active powdery mildew is present;

(e) Freezing when the berry is frozen or when the flesh of the berry is affected by freezing; and,

(f) Insects when any insect is present or there is visible evidence of insect injury, when mealybug residue or aphis honeydew are present, or when the appearance is materially affected by the presence of leafhopper residue.

(ii) The following shall be considered as damage to stems:

(a) Mildew when active powdery mildew is present on the stems, or when scars caused by this disease constrict or weaken any part of the main or lateral stems; and,

(b) Freezing when the stems are frozen or the capstems are swollen or dried, or when the main or lateral stems are water-soaked and limp, or dried, as a result of freezing.

(15) "Fairly well filled" means that the berries are reasonably closely spaced on main and lateral stems and that the bunch is not very loose or stringy.

(16) "Excessively tight" means that the berries are so closely wedged together that when the stem is fresh, the bunch is solid and the appearance is materially affected by berries on the lower portions being distinctly distorted from normal shape.

(17) "Injury to the bunch" means any defect which more than slightly affects the appearance of the bunch.

(18) "Shot berries" means very small berries resulting from insufficient pollination, usually seedless in those varieties which normally develop seeds. These berries may be entirely green and hard and are designated as "immature shot berries" They may mature and color uniformly with the normal berries on the bunch and are then designated as "mature shot berries"

(19) "Dried berries" means berries which are dry and shriveled to the extent that practically no moisture is present.

(20) "Well developed and strong" means that the main and lateral stems are firm, fibrous and pliable, and are not distinctly immature or spindly or threadlike at time of packing.

(21) "Diameter" means the greatest dimension of the berry measured at right angles to a line running from the stem to the blossom end.

(22) "Serious damage" means any defect which seriously affects the appearance, or the edible or shipping quality of the grapes and includes berries which are split, crushed, wet, affected by decay or waterberry, or damaged by heat or freezing, except that raisining grapes that are cracked or split, and grapes which show healed cracks at the blossom end shall not be considered as seriously damaged.

(23) "Mature" means that the juice from 10 percent, by weight, of whole bunches of grapes in the container, which appear to be least mature, shall test not less than 17 percent soluble solids, as determined by the Balling or Brix scale hydrometer, except that the varieties Emperor, Gros Colman, Pierce Isabella, Olivette Blanche, Rish Baba, Red Malaga, Cardinal, Ribier, Khalili, Dizmar and varieties similar to or synonymous with the above, shall test not less than 16 percent, and except that Muscat varieties shall test not less than 18 percent.

(24) "Fairly well colored" means in the case of:

(i) "Black varieties" that each bunch shall have not less than 85 percent, by count, of berries showing characteristic color, except that in the varieties Ribier, Rose of Peru, Black Prince, Black Hamburg, and Black Monukka each bunch shall have not less than 75 percent, by count, of berries showing characteristic color. Purple to black shall be considered characteristic color for the varieties Malvoise, Rose of Peru, Black Prince and Black Hamburg; reddish-purple to black shall be considered characteristic color for Cornichon and Black Monukka. Ribier grape berries shall be considered as showing characteristic color when at least 60 percent of the surface is purple to black color, not reddish-purple;

(ii) "Red varieties" that each bunch of the Tokay variety shall have not less than 45 percent, by count, and other red varieties shall have not less than 60 percent, by count, of berries which show at least 60 percent of the surface with characteristic color. Light pink, red, dark red or purple are considered characteristic color for the red varieties. (There are no color requirements for the Pink Thompson Seedless variety, Sultanina Rose) and,

(iii) White varieties: There are no color requirements for the white varieties.

(25) "Straggly" means that the berries are so widely spaced on main and lateral stems that the bunch is distinctly open or very stemmy or stringy in structure.

Effective time. The United States Standards for Sawdust Pack Grapes (European or Vinifera type) contained in this section and which supersede the United States Standards for Sawdust Pack Grapes (European or Vinifera type) effective July 20, 1939, shall become effective thirty (30) days after the date of publication in the FEDERAL REGISTER.

PART 52—PROCESSED FRUITS AND VEGETABLES, PROCESSED PRODUCTS THEREOF, AND CERTAIN OTHER PROCESSED FOOD PRODUCTS

SUBPART B—UNITED STATES STANDARDS[1]

CHILI SAUCE

On May 9, 1953, a notice of proposed rule making was published in the FEDERAL REGISTER (18 F. R. 2714) regarding proposed United States Standards for Grades of Chili Sauce. After considering all relevant matters presented, including the proposals set forth in the aforesaid notice, the following United States Standards for Grades of Chili Sauce are hereby promulgated under the authority contained in the Agricultural Marketing Act of 1946 (60 Stat. 1087; 7 U. S. C. 1621, et seq.) and the Department of Agriculture Appropriation Act, 1954 (Pub. Law 156, 83d Cong., Approved July 28, 1953).

§ 52.258 *Chili sauce.* Chili sauce is the product prepared from mature, clean, sound, tomatoes of the red or reddish varieties which are peeled and chopped or crushed, or all (or a portion) of the tomatoes may be chopped, crushed, or macerated and the peelings screened out in a manner so that at least a substantial portion of the seed remains in the product, to which are added salt, spices, vinegar, nutritive sweetening ingredients, and to which may be added vegetable flavoring ingredients such as chopped onion, chopped green or red pepper, chopped green tomatoes, chopped celery, and sweet pickle relish in such quantities as will not materially alter the appearance of the product with respect to the predominance of the tomato ingredient, and any other ingredients permissible under the provisions of the Federal Food, Drug, and Cosmetic Act. The chili sauce is processed in accordance with good commercial practice; is packed in hermetically sealed containers; and is sufficiently processed by heat, before or after sealing, to assure preservation of the product. The refractive index of the filtrate of the chili sauce at 20 degrees C. is not less than 1.3784.

(a) *Grades of chili sauce.* (1) "U. S. Grade A" or "U. S. Fancy" is the quality of chili sauce that possesses a good color; that possesses a good consistency; that possesses a good character; that is practically free from defects; that possesses a good flavor; and that scores not less than 85 points when scored in accordance with the scoring system outlined in this section: *Provided,* That the chili sauce may score not less than 14 points on the factor of character if the total score is not less than 85 points.

(2) "U. S. Grade C" or "U. S. Standard" is the quality of chili sauce that possesses a fairly good color; that possesses a fairly good consistency; that possesses a fairly good character; that is fairly free from defects; that possesses a fairly good flavor; and that scores not less than 70 points when scored in accordance with the scoring system outlined in this section.

(3) "Substandard" is the quality of chili sauce that fails to meet the requirements of "U. S. Grade C" or "U. S. Standard."

(b) *Recommended fill of container for chili sauce.* The recommended fill of container is not incorporated in the grades of the finished product since fill of container, as such, is not a factor of quality for the purposes of these grades. It is recommended that each container of chili sauce be filled as full as practicable without impairment of quality and that the product occupy not less than 90 percent of the capacity of the container.

(c) *Ascertaining the grade.* (1) The grade of the chili sauce is ascertained by considering, in conjunction with the requirements of the respective grade, the respective ratings for the factors of color, consistency, character, absence of defects, and flavor. The relative importance of each factor which is scored is expressed numerically on the scale of 100. The maximum number of points that may be given for each such factor is:

Factors:	Points
(i) Color	20
(ii) Consistency	20
(iii) Character	20
(iv) Absence of defects	20
(v) Flavor	20
Total score	100

(d) *Ascertaining the rating for the factors which are scored.* The essential variations within each factor which is scored are so described that the value may be ascertained for each factor and expressed numerically. The numerical range within each factor which is scored is inclusive (for example, "17 to 20 points" means 17, 18, 19, and 20 points).

(1) *Color.* (i) Chili sauce that possesses a good color may be given a score of 17 to 20 points. "Good color" means that the color of the chili sauce is bright; the color of the tomato ingredient is predominant and characteristic of properly prepared, well ripened, properly processed tomatoes; and that the added seasoning ingredients do not materially detract from the appearance of the product.

(ii) If the chili sauce possesses a fairly good color, a score of 14 to 16 points may be given. Chili sauce that scores in this classification shall not be graded above U. S. Grade C or U. S. Standard, regardless of the total score for the product (this is a limiting rule). "Fairly good color" means that the color of the chili sauce may be slightly dull but not off

[1] The requirements of these standards shall not excuse failure to comply with the provisions of the Federal Food, Drug, and Cosmetic Act.

color; the color of the tomato ingredient is characteristic of properly prepared, fairly well ripened, properly processed tomatoes; and that the added seasoning ingredients do not seriously detract from the appearance of the product.

(iii) Chili sauce that fails to meet the requirements of subdivision (ii) of this subparagraph may be given a score of 0 to 13 points and shall not be graded above Substandard, regardless of the total score for the product (this is a limiting rule)

(2) *Consistency.* (i) Chili sauce that possesses a good consistency may be given a score of 17 to 20 points. "Good consistency" means that the chili sauce is heavy bodied and when emptied from the container to a flat surface forms a moderately mounded mass and shows not more than a slight separation of free liquid at the edges of the mass.

(ii) If the chili sauce possesses only a fairly good consistency a score of 14 to 16 points may be given. Chili sauce that falls into this classification shall not be graded above U. S. Grade C or U. S. Standard, regardless of the total score for the product (this is a limiting rule) "Fairly good consistency" means that the chili sauce, when emptied from the container to a flat surface, may tend to level itself, or may show a moderate separation of free liquid at the edges of the mass, but is not excessively stiff or excessively liquid.

(iii) Chili sauce that fails to meet the requirements of subdivision (ii) of this subparagraph may be given a score of 0 to 13 points and shall not be graded above Substandard, regardless of the total score for the product (this is a limiting rule)

(3) *Character* The factor of character refers to the degree of disintegration of the tomatoes, and the tenderness and texture of the onion, celery, pickle relish, or other similar ingredients.

(i) Chili sauce that possesses a good character may be given a score of 17 to 20 points. "Good character" means that the product does not have a finely comminuted appearance and that the onion, celery pickle relish, and other similar ingredients are tender, reasonably firm, or crisp in texture.

(ii) If the chili sauce possesses a fairly good character a score of 14 to 16 points may be given. "Fairly good character" means that the product may be finely comminuted and that the other vegetable ingredients may be only fairly tender.

(iii) Chili sauce that fails to meet the requirements of subdivision (ii) of this subparagraph may be given a score of 0 to 13 points and shall not be graded above Substandard, regardless of the total score for the product (this is a limiting rule)

(4) *Absence of defects.* The factor of absence of defects refers to the degree of freedom from dark specks or scale-like particles, discolored seeds or pieces of abnormally discolored ingredients, tomato peel, and other defects.

(i) Chili sauce that is practically free from defects may be given a score of 17 to 20 points. "Practically free from defects" means that any defects present do not more than slightly affect the appearance or eating quality of the product.

(ii) If the chili sauce is fairly free from defects, a score of 14 to 16 points may be given. Chili sauce that falls into this classification shall not be graded above U. S. Grade C or U. S. Standard, regardless of the total score for the product (this is a limiting rule) "Fairly free from defects" means that any defects present may be noticeable but are not so large, so numerous, or so prominent as to seriously affect the appearance or eating quality of the product.

(iii) Chili sauce that fails to meet the requirements of subdivision (ii) of this subparagraph may be given a score of 0 to 13 points and shall not be graded above Substandard, regardless of the total score for the product (this is a limiting rule)

(5) *Flavor* (i) Chili sauce that possesses a good flavor may be given a score of 17 to 20 points. "Good flavor" means a good distinct flavor characteristic of chili sauce properly prepared from good quality ingredients. Such flavor is free from scorching or any objectionable flavor of any kind.

(ii) If the chili sauce possesses a fairly good flavor, a score of 14 to 16 points may be given. Chili sauce that falls into this classification shall not be graded above U. S. Grade C or U. S. Standard, regardless of the total score for the product (this is a limiting rule) "Fairly good flavor" means that the product may be lacking in good characteristic flavor, but is free from objectionable or off-flavors of any kind.

(iii) Chili sauce that fails to meet the requirements of subdivision (ii) of this subparagraph may be given a score of 0 to 13 points and shall not be graded above Substandard, regardless of the total score for the product (this is a limiting rule).

(e) *Tolerances for certification of officially drawn samples.* (1) When certifying samples that have been officially drawn and which represent a specific lot of chili sauce the grade for such lot will be determined by averaging the total scores of the containers comprising the sample, if, with respect to those factors which are scored:

(i) Not more than one-sixth of the containers fails to meet the grade indicated by the average of such total scores;

(ii) None of the containers falls more than 4 points below the minimum score for the grade indicated by the average of such total scores;

(iii) None of the containers falls more than one grade below the grade indicated by the average of such total scores;

(iv) The average score of all containers for any factor subject to a limiting rule is within the score range of that factor for the grade indicated by the average of the total scores of the containers comprising the sample; and

(2) All containers comprising the sample meet all applicable standards of quality promulgated under the Federal Food, Drug, and Cosmetic Act and in effect at the time of the aforesaid certification.

TITLE 26—INTERNAL REVENUE

Subchapter A—Income and Excess Profits Taxes

[T. D. 6042; Reg. 111]

PART 29—INCOME TAX; TAXABLE YEARS BEGINNING AFTER DECEMBER 31, 1941

REQUIREMENT FOR FILING INFORMATION RETURNS REPORTING DIVIDENDS PAID BY SAVINGS AND LOAN ASSOCIATIONS AND SIMILAR ORGANIZATIONS FOR CALENDAR YEARS AFTER 1952

Section 29.148–1 of Regulations 111 (26 CFR Part 29) as amended by Treasury Decision 5914, approved June 24, 1952, is further amended as follows:

(A) By striking out the last sentence of (b) which reads as follows: "In the case of a building and loan association, a cooperative bank, a homestead association, a credit union, a savings and loan association, or a corporation described in section 101 (10) (11) (12), or (13), making a payment of a dividend or a distribution to any shareholder, the information return on Forms 1096 and 1099 shall be rendered only in the case of payments amounting to $100 or more during the calendar year."

(B) By inserting in lieu of such last sentence the following: "In the case of a corporation described in section 101 (10) (11) (12) or (13) making a payment of a dividend or a distribution to any shareholder, the information return on Forms 1096 and 1099 shall be rendered only in the case of payments amounting to $100 or more during the calendar year. In the case of a savings and loan association, a cooperative bank, a homestead association, a credit union, or a building and loan association an information return is required to be filed with respect to dividends or distributions to a shareholder only if an information return would have been required under the provisions of § 29.147–1 had the dividends or distributions been payments of interest, except that, for years prior to 1953, such an organization is required to file an information return where the payments to a shareholder amount to $100 or more during the calendar year."

Because the purpose of this Treasury decision is to reduce the burden of filing information returns with respect to payments made by certain organizations for calendar years after 1952, it is found that it is unnecessary to issue this Treasury decision with notice and public procedure thereon under section 4 (a) of the Administrative Procedure Act, approved June 11, 1946, or subject to the effective date limitation of section 4 (c) of said act.

FLORIDA

NOTICE OF FILING OF PLAT OF SURVEY

SEPTEMBER 15, 1953.

Notice is given that the plat of original survey of the following described lands, accepted July 23, 1953, will be officially filed in the Bureau of Land Management effective at 10:00 a. m. on the 35th day after the date of this notice:

TALLAHASSEE MERIDIAN, FLORIDA

T. 66 S., R. 31 E.,
Sec. 19; Lot 3, containing 0.22 acre (Little Money Key)
T. 66 S., R. 32 E.,
Sec. 2, Lot 6, containing 1.75 acres (Rachel Key)

The plats represent the survey of two islands in Florida Bay which were not included in the original survey of the townships, shown upon the plats approved June 30, 1874.

Available information indicates that Lot 3, Sec. 19 (Little Money Key) is a coral sand formation underlain by the native coral formation and is 2 to 3 feet in elevation above mean high tide; that its exposed position to ravaging storms makes it highly doubtful that any type of cabin or structure could be maintained thereon; that Lot 6, Sec. 2, (Rachel Key) is of exposed coral formation with a thin, humus soil over the higher central portion and is 6 to 8 feet high, with sheer coral bank 3 feet high along its outer shores except for the southeast side which slopes gently into a mangrove fringe; that it supports a medium growth of tropical vegetation and timber consisting of buttonwood, 7-year apple, gumbo-limbo, scrub oak, black mangrove and prickly pear cactus, and that it is doubtful whether either of the islands can be classified for agricultural entry.

No applications for these lots may be allowed under the homestead or small tract or any other nonmineral public land laws unless the land has been classified as valuable or suitable for such type of application or shall be so classified upon consideration of an application.

At the hour specified on the abovementioned 35th day, the said lands shall become subject to application, petition, location or selection, under applicable laws, subject to valid existing rights, the provisions of existing withdrawals and the 90-day preference right filing period for veterans and others entitled to preference under the act of September 27, 1944 (58 Stat. 747; 43 U. S. C. 279–284) as amended.

Information showing the periods during which and the conditions under which veterans and others may file applications for these lands may be obtained on request from the Regional Administrator, Region VI, Bureau of Land Management, Department of the Interior, Washington 25, D. C.
